

AI Roast Generator – AI Interaction Prompts

Prompt 1: Basic Idea

Prompt:

 > ChatGPT ▾

 Free offer ×

I am a beginner in C++ and I want to build a simple console-based project for my assignment.

Please write a beginner-friendly C++ program that generates a funny roast message using the user's name.

Requirements:

- Ask the user to enter their name
- Display a roast message using that name
- Keep the code simple and easy to understand
- Add comments explaining each part of the code

Also briefly explain how the program works.

Here's a simple and beginner-friendly C++ console program that generates a funny roast using the user's name 🗨️

 C++ Roast Generator Program

Example Output

Enter your name: Riya

Hey Riya, even your shadow leaves you when it's dark! 😂

Prompt 2: Improvement

Prompt:

📁 > ChatGPT ▾

📁 Free offer ×

Now improve the previous C++ program to make it more advanced and interesting.

Enhancements required:

- Store at least 10 different roast messages
- Use a vector or array to store them
- Randomly select a roast each time the program runs
- Use a placeholder like {name} inside roast templates
- Replace {name} with the actual user input

Ensure:

- Code remains readable
- Proper comments are added
- Logic is explained step by step

Nice—this turns your basic program into something that actually looks like a **mini project**. Let's upgrade it properly while keeping it beginner-friendly.

Advanced C++ Roast Generator (With Randomness + Templates)

Example Output

Enter your name: Riya

🔥 Roast Generator 🔥

Riya, you're like a cloud... when you disappear, it's a beautiful day ☀️.

Prompt 3: Debugging (Random issues)

Prompt:

📁 > ChatGPT ▾

📁 Free offer ×

I noticed that my program is generating the same roast message every time I run it.

Please:

1. Identify the reason for this issue
2. Fix the problem in the code
3. Explain clearly why this issue happens in C++

Make sure the program now produces different outputs on different runs.

Good catch — this is a **very common beginner issue in C++**, and fixing it will make your program behave correctly.

⚠️ 1. Why Your Program Shows the Same Roast Every Time

The problem is usually this line:

↗ C++

4: String Handling Bug

Prompt:

📁 > ChatGPT ▾

📁 Free offer ×

In my program, I am using a placeholder {name} in roast templates, but sometimes it is not being replaced correctly.

Please:

- Fix the string replacement logic
- Ensure all occurrences of {name} are replaced properly
- Use standard C++ string functions
- Explain the solution in a simple way

This issue usually happens because the replacement logic **doesn't correctly continue searching after replacing**, or it only replaces the first occurrence.

Let's fix it properly so every {name} in the string gets replaced 🙌

✅ Correct & Reliable Replacement Logic

🔧 Fixed Function

↗ C++

```
#include <string>
```

Prompt 5: Edge Case Handling

Prompt:

Free offer x

Improve the program to handle edge cases.

Specifically:
- If the user enters an empty name, display an error message
- Prevent the program from crashing
- Ensure smooth user experience

Also explain why handling edge cases is important in programming.

Good thinking—this is exactly what makes a project look **polished and professional**.

Let's make your program safer and smoother 🍌

📄

Improved C++ Program (With Edge Case Handling)

📄 C++

#include <iostream>

Prompt 6: Code Quality + Readability

Prompt:

Free offer x

Refactor the program to improve code quality.

Requirements:
- Add proper comments for each section
- Use meaningful variable names
- Maintain clean formatting
- Ensure the program is beginner-friendly and easy to understand

Also describe how these improvements make the code better.

You're at the stage where small improvements make your code look **clean, readable, and "topper-level"**.

Let's refactor your program properly 🍌

📄

Refactored C++ Roast Generator (Clean & Beginner-Friendly)

📄 C++

#include <iostream> // For input/output
#include <vector> // For storing roast messages
#include <cstdlib> // For rand() and srand()
...
